Colour -	Black
Material -	Nitrile
Size -	Large
Thickness -	6 mil

Product Description

Nitrile gloves are a popular alternative to latex gloves, when avoiding the concerns of latex allergies. These disposable gloves are made from synthetic rubber (acrylonitrile monomer) and they bring superior comfort, chemical resistance and abrasion protection. Nitrile disposable gloves are the preferred hand protection for use in the cabinetry and woodworking industries.

The main point in selecting Nitrile disposable gloves is to consider how much personal protection you require from hazardous materials. Thinner gloves provide slightly less protection as compared to thicker more durable gloves.

Product Advantages

- Uniform construction
- Powder-free
- 100% Nitrile, no latex
- Chemical resistance
- Rolled cuff
- Lightly textured finish

Important Information

Due to the ongoing situation, we have limited stock available and backorders may not be filled. We suggest looking for the same size in a different thickness if the exact size and thickness you want is not in stock. We may be removing this item from our website until the stock situation stabilizes.
